Troubleshooting

Problem 1: Incorrect performer or invalid role

Possible cause: attribute contains an incorrect role name, or ABDULMAJEED is not a valid Workflow user.

How to troubleshoot: Verify the actual role in the Workflow directory, confirm that the correct internal name is supplied, and verify that the role is associated with the intended active EBS user. Re-run the workflow after correcting the role.

Problem 2: Incorrect notification message or result configuration

Possible cause: The message's Result lookup type does not match the notification's Result Type, or the transition does not match `ACKNOWLEDGE`.

How to troubleshoot: Verify that the message and notification both use `WELCOME_RESULT`, confirm that `ACKNOWLEDGE` exists as a lookup code, and verify the transition from the notification to End.
